Dr. Warren J. Corey,

Veterinary Dentist,

OFFICE AT WALDO HOUSE,

Stables on Waldo Street, Worcester, Mass.,

Calls the attention of Horse Owners to his improved method of operating on horse's teeth. Some of the results to horses in consequence of having ill-shaped or diseased teeth are—driving on one rein, combining, frothing, loss of flesh, side bound, running at the rack, scouring, tossing the head, looking around at his side when driving, sore cheeks and tongue, pulling, backing and shying.

One or more of the above habits or diseases are sure to follow as a result of delayed or diseased teeth; consequently it is very difficult to keep the horse in good condition; and when now it is impossible to fat him. Young or old horses suffer alike in such cases; and after being treated will become good drivers and good feeders. Any person wishing to have their horses examined, can do so, free of charge, by calling at the Stable. The most vicious horse will calmly submit to my treatment without the use of rope or twitch.

Orders by mail promptly attended to.

He has the best BLISTER for Spavin, Ringbone, Clingfasts in the country. Also, has the best Bit ever made for a pulling horse.
